6:00pm - 9:00pm | Dinner and Lecture

Course Description

In this course we will discuss the variety of treatment options available with Noris Medical USA. Noris Medical is a global dental implant company that has an extensive dental implant related portfolio to assist the surgeon and the implant restorative dentist to provide dental implant services for their patients. The most unique feature of Noris Medical is their zygomatic implant portfolio. The dental implant portfolio includes single piece implants to support removable and fixed restorations, as well as more common dental implants for routine dental implant surgery and restoration.

Course Objectives

- Why "More"?
- Who are candidates?
- Features and Benefits of the Noris Medical systems
- Case Examples
- Advanced cases with the unique Noris Medical Zygomatic and Pterygoid implants
- Marketing Pearls
- Getting additional training with the Noris Academy

Speaker

DR. JACK T KRAUSER, DMD

Jack T. Krauser, DMD, has been involved in implant surgical therapy since 1988. Not only was he the first practicing periodontist in Palm Beach County to be trained in osseointegration, the Swedish method that all modern case procedures are based upon, he also has significantly contributed to dental implant advances with his innovations in product design and treatment methodologies. For example, several of his designs are patented and utilized by major American and international implant companies. He has lectured on 6 continents. He has coauthored a definitive textbook on the subject, *Dental Implants: The Art and Science*, by Elsevier publishing. He has achieved the honor of Fellow in the Academy of Osseointegration. He is one of a very small group of clinicians who has been invited to share his thoughts and treatment outcomes with the Food and Drug Administration on the effectiveness of dental implant care administered to the public. There are 4 textbook chapters as well as more than 24 peer-reviewed journal articles on the subject matter.

As a leader of several global and national implant societies, he has enthusiastically encouraged his colleagues to join learn and share material for the overall growth of the field. Curiously, in this crowded field of talented local clinicians, the 2011 edition of his textbook's cover depicts a clinical example of the now popular "All-on-Four" clinical procedure and concept. Several cases for truly indigent and needy patients have received pro bono work and care. Finally, he has been featured on the cover of *Dentistry Today* as one of the top dental educators since 2001.
